

WELCOME TO LASER/IPL HAIR REMOVAL

Thank you for choosing the Maryland Laser, Skin and Vein Institute, LLC where you will experience the most advanced technological medical treatment for the removal of unwanted hair. For optimum results, your treatments must be a combined effort between you and our practice.

Enclosed are forms for you to fill out prior to your consultation. Please bring all of these forms, completed, and any questions you may have with you. We will review these completed forms with you during the consultation.

Medical History Questionnaire
Registration Form
Consent for Treatment

The consultation/test area fee is \$100.00, and is due when you schedule your consultation. If you elect to have treatment, this consult fee will be applied to your first treatment.

For the **ten days immediately prior** to your consultation, please **DO NOT wax, shave, tweeze, bleach, or undergo electrolysis** on the hair you are seeking to remove. We will be taking photographs of the area(s) at your first appointment to chart your progress. We need to be able to see and document the extent of your problem.

Bear in mind that overly dry skin may diminish the efficiency of the laser, so please keep skin at or near the areas to be treated moisturized at all times except, however, **DO NOT moisturize, apply oil or makeup of any kind to any areas that will be treated on the day of treatment.**

Refrain completely from sunbathing and the use of artificial bronzing agents during your treatment cycle and for at least four (4) weeks (preferably 3 months) after your last appointment. Darkly pigmented skin may absorb a portion of the energy that should be striking the hair follicle. If you should be exposed to strong sunlight for any length of time during your treatment cycle, wear SPF 30 or greater sunscreen and tightly woven fabrics that will protect the treatment area.

We are glad that you have chosen our practice to start you on the road to joining the thousands of people whose unwanted hair has been eliminated with Laser/IPL treatments.
